

MARKET IN A MINUTE

A SUMMARY OF MARKET CONDITIONS FOR JUNE & FIRST HALF 2018

CONTRACTS

Contract activity in June 2018 was **up 1.8%** from June 2017 but was down 7% for homes priced less than \$500,000. Through the first half of the year contract activity is down just 0.7%. The average number of days on the market for homes receiving contracts was 30 days in June 2018, down slightly from 31 days in June of last year.

URGENCY INDEX

The Urgency Index, simply the percentage of homes going under contract that were on the market 30 days or less, was up in June compared to the year prior. During the past 13 years, the Index has been as high as 83% (May 2005) and as low as 30% (December 2008). In June 2018, the Urgency Index was **72.8%**, up from 71.4% in June 2017.

INVENTORY

The number of homes on the market at the end of June was **down just 1.0%** compared to the end of June 2017. The number of new listings coming on the market **decreased 8.1%** compared to June 2017. Overall supply – 1.5 months – was unchanged from this time last year.

INTEREST RATES

After a half-point jump in 30-year fixed mortgage interest rates early in the year, the rate at the end of June was 4.55%, right where it has hovered since April. It is two thirds of a point higher than it was a year ago at the end of June 2017. We continue to expect that rates will rise gradually through the rest of the year, but we'd be surprised if they top 5% at any point in 2018.

AFFORDABILITY

The payment on a no-money-down, 30-year fixed mortgage for a median-priced home is **16.9%** higher than a decade ago in June 2008 – but the median price is **42.8% higher**. The payment now is **10.6% higher** than this time last year as a result of rising prices and interest rates. The mortgage payment for a median priced home (\$3,071) was higher in June than the median rented price (\$2,500).

DIRECTION OF THE MARKET

Washington, DC continues to have the strongest real estate market in the region. It has the highest average and median sales prices, the shortest average time on the market and the highest absorption rates. The lack of affordable inventory will continue to put a damper on the number of home sales, so we expect the total sales in 2018 to look a lot like 2017.

URGENCY INDEX

% of Contracts on the Market for 30 Days or Less
Washington, DC - 2014-Current

URGENCY INDEX - 2014-Current

- This chart compares the number of contracts (green line) to the percent that were on the market 30 days or less (blue bars). At first glance, it may appear that the lower contract activity also means a lower percentage of homes that sell quickly – but that’s not always true.
- As an example, December is always the month with the lowest number of contracts. December 2011 (not on this chart) had an index near 30% range, but that jumped to 50% in 2012, an early indicator that the market was picking up heading into 2013.

Absorption Rate by Property Type

The following tables track absorption rate by property type, comparing the rates in the just-completed month to the rates in the same month of the previous year. The absorption rate is a measure of the health of the market and tracks the percentage of homes that were on the market during the given month and in the given price range that went under contract. [The formula is # Contracts/(# Contracts + # Available).] An example: The absorption rate for attached homes priced \$300,000-\$499,000 in June 2018 was 53.9%; that compares to a rate of 45.8% in June 2017, and the increase means the market was better in 2018 for that type of home. If the absorption rate was less in 2018 than in 2017, we have put the 2018 rate in **red**. This month there was **improvement for 12 of the 18 individual price categories. DC still has the highest absorption rates in the region.**
